DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to a method of forming an integrated circuit device ,
classified in class 438, subclass 765.
 - II. Claims 14-17, drawn to a capacitor, classified in class 257, subclass 532.
 - III. Claims 18-24, drawn to s method of forming a capacitor, classified in class 438,
subclass 396.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I or III, and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the case if I and II, that the process as claimed can be used to make other and materially different product such as a an ILD, PMD, etch stop, or gate insulator. In the case of III and II, the product as claimed can be made by another and materially different process such as by deposition of the metal oxide on the insulator, rather than by reaction with the insulator layer
3. Inventions I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as forming a ILD, PMD, etch stop, gate insulator, or a gate electrode. See MPEP § 806.05(d).

Art Unit: 2813

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

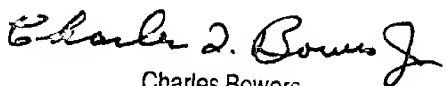

5. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
